

Mining is a tough, stressful environment where accident prevention is a top priority. With multiple systems active, full visibility and control over your operation is a necessity.

The Ctrack solution offers flexibility for mining and yellow equipment operations. Utilising a range of remote monitoring systems to alert control room staff to driver behaviour, safeguarding against accidents and ensuring

maximum efficiency and productivity for your assets. Our solution offers asset-mounted sensors providing instant and detailed reports on events and situations.

This includes driver management, driver licence renewal control, collision avoidance, speed, fuel consumption, oil pressure, coolant temperature and optimal loading. Live and passive video surveillance is also one of the multiple functions our solution offers.

TYPES OF ASSETS WE CAN TRACK:

Always Visible

MINING AND YELLOW EQUIPMENT

REAL-TIME VISIBILITY SOFTWARE
